DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114 was filed in this application after a decision by the Board of Patent Appeals and Interferences, but before the filing of a Notice of Appeal to the Court of Appeals for the Federal Circuit or the commencement of a civil action. Since this application is eligible for continued examination under 37 CFR 1.114 and the fee set forth in 37 CFR 1.17(e) has been timely paid, the appeal has been withdrawn pursuant to 37 CFR 1.114 and prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 3/10/08 has been entered.

Allowable Subject Matter

Claim 140 is allowed.

The following is a statement of reasons for indication of allowable subject matter. The prior art fails to teach or suggest the limitations of:

“demonstrating, to the client, that a plurality of credit management activities of the agent on behalf of the client are securely, continuously, and transparently monitorable by the client in real-time across a packet-switched public network via a network-based user interface... said execution [of agent activities] adapted to be halted in real-time by the client across the packet-switched public network via the network-based user interface...[creating an audit trail]... the audit trail securely, continuously, and transparently examinable by the client across the packet-switched public network via

the network-based user interface; and in real-time, securely, continuously, transparently, and automatically communicating the plurality of credit management activities of the agent to the client across the packet-switched public network via the network-based user interface.” (as in Claim 140).

It is old and well known in the art of financial management to conduct analyses of financial risks and credit exposures when a party is invested in financial instruments, and to manage such risks and exposures through hedging of potential risk. Such activities, at one time, were conducted manually by financial agents (e.g. traders, brokers, investment managers) utilizing paper. However, with the advent of computer technology, such financial management activities have migrated to computerized systems.

Furthermore, it is also old and well known in the art of organizational management for a supervisor to delegate activities to a subordinate, allowing for greater organizational efficiency. Depending upon the relationship between the supervisor and the subordinate (e.g. trust level) and the nature of the activities delegated (e.g. importance) to the subordinate, the supervisor may decide the quantity and quality of monitoring of the subordinate's activities that may be required.

The instant application distinguishes from these old and well known practices by allowing a supervisor (a client) to monitor the financial management activities of a subordinate (an agent) in real-time over a networked computerized system, to intercede and halt the subordinate's financial management activities in real-time, to monitor an audit trail of the subordinate's financial management activities in real-time and to,

otherwise, communicate the financial management activities of the subordinate to the supervisor in real-time.

Furthermore, the Examiner asserts that the inventive or innovative step does not need to be derived from the individual components of the invention but can be derived from a unique or novel approach to combining or utilizing such prior existing elements, for the Federal Circuit has long established that “[c]ombination claims can consist of new combinations of old elements . . . for it may be that the combination of the old elements is novel and patentable.” *Clearstream Wastewater Sys. v. Hydro-Action, Inc.*, 206 F.3d 1440, 1444, 54 USPQ2d 1185, 1189 (Fed. Cir. 2000).

Examiner asserts that the inventive or innovative step in the instant application is derived from utilizing a networked computerized system to monitor, audit and, at times, intercede in the activities of an interconnected subordinate, in conjunction with the subordinate performing specific financial management activities.

Stein (US Patent 5,684,952) discloses a method/system for allowing a supervisor (a teacher) to monitor the activities of a subordinate (a student) in real-time over a networked computer system (see col. 5, line 65 – col. 6, line 10).

Neither this patent, alone nor in combination with others, discloses nor suggests the feature of monitoring financial management activities, either in general or as specifically claimed by the Applicant. Furthermore, this patent, neither alone nor in combination with others, discloses nor suggests the feature of creating or monitoring an audit trail of a subordinate's activities, nor allowing the supervisor to intercede or halt the activities of the subordinate over a networked computerized system.

Periphonics (Periphonics Introduces ScreenSentry, a CTI Client that Provides a Complete View of Call Center Agents' Performance. Business Editors Computer Telephony Expo. Business Wire. September 15, 1999. p. 1) discloses a method/system for allowing a supervisor (call center supervisors) to monitor activities of a subordinate (call center agent) in real-time over a networked computerized system, and to monitor an audit trail of the subordinate's activities in real-time.

Neither this non-patent literature, alone nor in combination with others, discloses nor suggests the feature of monitoring financial management activities, either in general or as specifically claimed by the Applicant. Furthermore, this non-patent literature, neither alone nor in combination with others, allowing the supervisor to intercede or halt the activities of the subordinate over a networked computerized system.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
